

NUVERA®

All-In Fuel Cell Solutions
Product Intro

The on-site Nuvera® hydrogen generator and fueling station (and other available hydrogen supply options) supplies hydrogen to dispensers that are located where operators need them – indoors or outdoors. The installation pictured has space for up to three generators, and occupies a 15m x 19m area directly outside your facility.

Fast-Fueled Power Option to Transform Electric Fleet Operations

Forklift fleet operations can increase runtime, labor hours and available space with hydrogen power and supply solutions. Hydrogen fuel cells have become established in materials handling because they offer the benefits of electric drive trains with convenient, fast refueling – along with the ability to meet the demanding load profiles of distribution, warehousing, and manufacturing operations.

Together with the offerings of Yale, Nuvera provides fuel cell systems, hydrogen options, fueling stations and service for all-in fuel cell solutions.

If you have a multi-shift, high-throughput fleet, operating 15 lift trucks or more, you could benefit from learning more about your power options.

Convenient, fast refueling of electric trucks is enabled by the efficient power of Nuvera® fuel cell systems.
